

Demands of the European Milk Board (EMB)

There are ways out of the current crisis that has the dairy market in a stranglehold. The milk producers – represented by the European Milk Board – and politicians at national and EU level must cooperate to implement these solutions successfully.

Demands

Securing sustainable milk production throughout Europe

Via flexible adjustment of milk volumes to demand – the basic requirement for cost-covering milk producer prices

The European Milk Board lobbies for milk producers in Europe. The Board has members in 14 European countries, representing about 100,000 milk producers. We stand for forward-looking, sustainable milk production in every region of Europe that enables farmers to earn a decent living from their labour.

The basic prerequisite for this is a milk price that covers the average milk production costs.
