EU Market outlook: moderate milk rise in 2015

Milk production is expected to increase significantly across the EU in the years following the removal of the quota system, but in 2015, an increase of just 1% is expected, according to the Commission's latest short-term market outlook. The supply increase is expected to be higher in countries seeing an expansion of the dairy herd such as Ireland (+4.2%), the Netherlands (+0.8%) and Germany (+0.7%). Production of skimmed milk powder (SMP) and whole milk powder (WMP) – which climbed by 22,5% and 5,4% last year, respectively – is expected to rise further this year.
